

**Model No: SR-1000H**  
Mold Sweat Dehumidifiers

24 hours automatic operation timing setting and automatic malfunction display

XMD mold dehumidifier is mainly used in the plastic and rubber molding. As the mold use the cooling water to reduce the moulding cycle, which result in the problem of water condensation, it is the most applicable for PET and XMD bottle shooting out particularly.

**Features:**

- The total power switch with mechanical chain function
- Return air cooling and filtering function
- Choice digital dew point detector attached to a high dew point and alarm instructions
- In normal atmospheric conditions, it can control precisely humidity throughout the year
- Prolong mould's life, reduce erosion, improve the rate of good quality product
- Dry wind temperature ia about 30°C from the exit to mould, which don't lean to the aroud teperature of mould is too low, so that the injection machine window condensate Random with removable return air collector can be confined to achieve the cycle of applications, particularly applicable to the tropical climate environment
- Use P.I.D. temperature control system with regeneration temperature settings and actual temperature display screen
- Honeycomb designer with dehumidification and stable dryness
- Motor overload and reverse alarm function

## Model No: SR-1000H

### Mold Sweat Dehumidifiers

Condensation shows that there is water-content gas when the temperature of mold surface is lower than the dew point temperature of surrounding air, which influent the product quality and product efficiency. Meanwhile, this phenomenon erodes the mold surface and results in environmental pollution. The machine uses the honeycomb running system to dehumidify, which always ensure the mould to maintain 0-10 low dew point air environment. This feature that don't produce the condensation, can't be subject to seasonal changes and reduce largely the rate of defective and waste products.

### Technical Parameters

| Model                             | Unit                | SR-500H | SR-1000H | SR-1500H | SR-2000H |      |
|-----------------------------------|---------------------|---------|----------|----------|----------|------|
| Dry windmill                      | kw                  | 2.2     | 3        | 3x2      | 3x2      |      |
| Renewable windmill                | kw                  | 0.55    | 0.75     | 0.55x2   | 0.75x2   |      |
| Dry wind flow                     | m <sup>2</sup> /hr  | 500     | 1000     | 1500     | 2000     |      |
