

# INJECTION MOULDING MACHINES

## SR-880-22 雙色澆注機

### PU Shoe (sole) Pouring Machine (Two Color & Two Density)

#### Characteristics:

1. Have two A tank and two B tank, can make different density and different color foaming outside, by mix each A and B under requirement. Especially advantage in double pouring head can make transparent polyurethane outside at same time.
2. Under different proportion of A and B raw material, can get different properties polyurethane sole material. The mix head with four needle which can work independently.
3. Heating system with electricity, make heating more fast and more efficient in power saving.
4. Self-developed PLC, with function of setting time, real-time monitoring and so on.
5. The speed of pump use frequency conversion control, with advantages of energy saving and keep the rotational speed when voltage instability.

#### Technical Parameter:

Model	JG-880-22
Tank quantity	4
Tank capacity	250L
Pump quantity	4
Speed of pump(r/min)	0-280
Precision (%)	± 0.5
Max rotating Speed of injection screw	4500/8600-10000 (Choice by yourself)
Clean the head	Automatic/By hand
Voltage	380V,50HZ, or 415v ,60hz
power	18(kw)
Clean quantity	4500(r/min)>25,9000(r/min)>160
Product characteristics	Two color two density, Produce PU and transparent PU sole at the same time
Productivity(output )	if work 8 hours can produce 3600pairs of the shoes. every four minute can produce 30prs of the shoe.
