

Model No: SR-9216J**Full-auto Rotary Type Double Color Directly Injection Moulding Machine****Features:**

This machine is used specially for making foamed and non-foamed slow-running shoes, leisure shoes, plimsolls and various sports shoes.

Raw materials: suitable for the production of foamed or non-foamed thermoplastic raw materials, such as PVC,TPR etc.

Injecting system: use full computerized measuring and full-proportional pressure controlling system, accurately measuring and quickly injecting out.

Mould-locking system: use the toggle type mechanism fitted with hydraulic to lock molds, tightly lockable, making the product without burrs and with highly quality.

Last adjusting system: there is an adjustable mechanism for the last. Lasts of various heights can be held on one machine. Causing a high capacity for the mould production.

The sequence of mold-closing and last pressing can be selected at will.

Model No: SR-9216J**Full-auto Rotary Type Double Color Directly Injection Moulding Machine****Technical Parameters**

Model No	SR-9216J
Raw Material	PVC.TPR
Stations	16
Screw Diameter	φ75/65
Max. Injection Capacity	880/660cm ³ /shot
Mold Dimension	340 x 180 x 60mm ³
Total Power	35.7kw
Oil Tank Capacity	400Lx2
Machine Dimension (LxWxH)	8000x5000x1900mm ³
Machine Weight	15.5T
Last Travel	60mm
Last Height	210~260mm
Injection Travel	200mm
